

IVR 2006

One of the world's most important exhibitions for Industrial Virtual Reality equipment (IVR 2006), was held at the Tokyo International Exhibition Centre, 'Tokyo Big Sight', from June 21st to June 23rd 2006. The exhibition has been famous world wide for many years, with many international visitors attending. The exhibition shows industrial trends for Industrial Virtual Reality equipment for both hardware and software.

KBK, the exclusive distributor for Z+F laser scanning products, both hardware and software, for the Japanese area, exhibited at Tokyo Big Sight and reported that the fair was a great success. Tomoo Hirate, Sales Manager for KBK stated that "IVR 2006 was a big success and we have heard from our customers that Z+F laser scanning products have defined the standard in the Engineering Industry. The solutions are very focused and bring a lot of merit to the designers in the plant industry".

This year, KBK's focus during the exhibition was to present solutions to the customers. Demonstrating real applications in LFM Server, LFM Modeller and JRC Reconstructor together with IMAGER 5003 showed the possibilities for both rework and documentation. Tomoo Hirate added that "It seems that LFM also sets the standard in Japan". Dr. Christoph Froehlich, Managing Director of the Z+F Group, added "Seeing the needs of not only Japan for accurate 3D as-built information, our products seem well placed for the industry. In particular LFM Server and JRC Reconstructor received a very positive response not only from visitors during the exhibition but also from many customers during my visit to Japan".

The organisers of IVR 2006, Reed Exhibitions, reported an increase in visitors of more than 30% at this year's exhibition than the previous year. This is an indication of the importance of this field. SPAR will issue a separate report covering the exhibition.

"Many thanks to KBK for their professional organisation and our congratulations on their success." Dr. Christoph Froehlich added, "Z+F are pleased to have such professional distributor for our products".
